

Dear Microsoft Customer:

Congratulations on acquiring Microsoft® Macro Assembler version 5.1. Among the diskettes included in this package is a high-density, 1.2-MB diskette that contains information specific to MS® OS/2:

Microsoft CodeView® and Utilities for MS OS/2

Please note, too, that if you want to install Macro Assembler from a disk drive other than the A: drive, you must use the MS-DOS® ASSIGN command to assign the drive letter A: to the drive that you are installing from. If you are installing the MS OS/2 version of Macro Assembler, make sure that you install from the high-density drive.

For example, if you want to install from drive E:, enter:

ASSIGN A = E

Sincerely,

A handwritten signature in cursive script that reads "Pat Crenshaw".

Subject: Fix diskette for Microsoft Macro Assembler 5.1

I understand that there is a diskette available, with various "fixes" to MASM 5.1. As a registered user, I would like to know how to get a copy of this diskette (in 5.25", 360KB format).

Thank you,

Herbert C. Johnson

Herbert C. Johnson

Dear Mr. Johnson,

Thank you for your letter of February 27 regarding 'fixes' to Microsoft Macro Assembler. The enclosed disk has the files for these fixes.

On the root directory you will find a README.DOC which describes the problems that would be fixed by using the new MASM.EXE. files. Also on the root directory is the MASM.EXE file to be used in DOS applications.

You will also find on the disk a BINB directory. It contains a MASM.EXE file for use in bound applications in OS/2. You will need to copy that MASM.EXE into your BINB directory which should have been created on your system if you were setting up to run in OS/2.

If you have further questions please contact Microsoft Product Support (206)-454-2030.

Thank you

Jim Fineran
